

## PROJECT SPECIFICATION

## Make Your App Material

### Required Behavior

#### MEETS SPECIFICATIONS

App uses the Design Support library and its provided widget types ( `FloatingActionButton` , `AppBarLayout` , `SnackBar` , etc).

App uses `CoordinatorLayout` for the main Activity.

App theme extends from `AppCompatActivity` .

App uses an `AppBar` and associated `Toolbar` s.

App provides a Floating Action Button for the most common action(s).

App properly specifies elevations for app bars, FABs, and other elements specified in the [Material Design specification](#).

**MEETS SPECIFICATIONS**

App has a consistent color theme defined in `styles.xml`. Color theme does not impact usability of the app.

App provides sufficient space between text and surrounding elements.

App uses images that are high quality, specific, and full bleed.

App uses fonts that are either the Android defaults, are complementary, and aren't otherwise distracting.

App conforms to common standards found in the [Android Nanodegree General Project Guidelines](#).

App utilizes stable release versions of all libraries, Gradle, and Android Studio.
